PROFILE

Data Engineer with experience in building and maintaining data pipelines, optimizing ETL workflows, and performing efficient data manipulation using SQL and Python. Detail-oriented, process-driven, and focused on delivering reliable data solutions. Strong analytical mindset and eager to expand skills into enterprise BI environments, including SAP BW.

WORK EXPERIENCE

DATA ENGINEER

AnalyticsPro

February 2021 - Present

Develop and maintain ETL pipelines used across analytics and reporting teams. Implement automated data workflows using Python and SQL. Responsible for extracting, transforming, and loading data from various sources into centralized repositories. Collaborate with data analysts and business stakeholders to ensure data quality and consistency. No direct experience with SAP BW, but familiar with enterprise data environments and structured ETL processes.

EDUCATION

B.S. Computer Science

2016-2020

University of Colorado Boulder

Coursework included algorithms, distributed systems, databases, software engineering, and data structures. Gained strong foundations in programming, data processing, and computational problem solving through academic and project work.

SKILLS

SQL,

Python,

ETL
